

Artist Statement

Treta's Italian Grill website was created using Dreamweaver, HTML5, CSS3, jQuery, Photoshop, Illustrator, and webaim.org specifications for accessibility. HTML5 was used to provide the webpage hierarchy and page links. An external CSS3 file was used to style elements of the website, such as colors, font properties, and spacing. All images were optimized in Photoshop by saving for web. jQuery was used to create an accordion for carryout ordering and the large type and default type buttons on the Lasagna Recipe page. A reservations form was also created that validates name, email address, and password inputs and displays appropriate error messages. A map from Google maps was embedded onto a page on the website. Treta's Italian Grill was created to give the restaurant an online presence that was accessible to all.
